Introduction

This NET has been written in two parts:

Part 1: specifies layers 1 and 2 attachment requirements;

Part 2: specifies the layer 3 attachment requirements.

1 Adoption

The content of NET 3, Part 1 was adopted by a meeting of the Technical Recommendations Application Committee (TRAC) on the 16th October 1992. This edition (2nd edition) includes all amendments adopted by TRAC since that date.

The content of NET 3, Part 2 was adopted by a meeting of the Technical Recommendations Application Committee (TRAC) on the 19th April 1991. This edition (2nd edition) includes all amendments adopted by TRAC since that date.

2 Scope and technical requirements

This NET details the attachment requirements for terminal equipment to connect to an interface at the T-reference point, or coincident S/T-reference point, to a public integrated services digital network (ISDN) using ISDN basic access. The precise scope and technical requirements of this NET are defined in the European telecommunications standards (ETSS) referred to in clause 5 of this NET.

3 Date of Application

This NET applies from 16th October 1992 within those States represented in the list of TRAC MOU Signatories, subject to a Transition Period.

4 Transition Period for this NET

This NET has been subject to a transition period which expired on 31st December 1993. Thus, the only applicable standard for type approval purposes within the Scope is this NET, except where the competent national authorities have notified to the European Commission before that date the existence of ISDNs which do not conform to the relevant European telecommunications standards (ETSS), together with reference to the applicable technical specifications and the intended date beyond which type approval will not be granted for terminals conforming to those applications

5 Reference to European telecommunications standards (ETSS)

The standards referred to in clause 2 of this NET are:

NET 3, Part 1: ETS 300 153 (1992): "Integrated services Digital Network (ISDN); Attachment requirements for terminal equipment to connect to an ISDN using ISDN basic access".

ETS 300 153/A1 (1995): "Integrated services Digital Network (ISDN); Attachment requirements for terminal equipment to connect to an ISDN using ISDN basic access".

NET 3, Part 2: ETS 300 104 (1991): "Integrated services Digital Network (ISDN); Attachment requirements for terminal equipment to connect to an ISDN using ISDN basic access, Layer 3 aspects".

ETS 300 104/A1 (1994): "Integrated services Digital Network (ISDN); Attachment requirements for terminal equipment to connect to an ISDN using ISDN basic access, Layer 3 aspects".

History

Document history		
1988	First Edition	Published by CEPT, contained technical content for Part 1 only.
1991		Technical content of Part 2 adopted by TRAC.
1992		Revised technical content of Part 1 adopted by TRAC.
1994		Various amendments to the technical content of both parts adopted by TRAC.
September 1995	Second Edition	Published by ETSI (now refers out to the ETSs containing the technical content of both Parts, including the amendments).
February 1996		Converted into Adobe Acrobat Portable Document Format (PDF)
